Finite Maximum critical path latency: 1,299 ms		
Initial Navigation		
		
Preconnected origins		
preconnect hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.		
no origins were preconnected		
Preconnect candidates		
Add preconnect hints to your most important origins, but try to use no more than 4.

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

▲ Buttons do not have an accessible name

▲ Select elements do not have associated label elements.

▲ Links do not have a discernible name

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

CONTRAST

▲ Background and foreground colors do not have a sufficient contrast ratio.

These are opportunities to improve the legibility of your content.

BEST PRACTICES

○ Identical links have the same purpose.

These items highlight common accessibility best practices.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

▲ llms.txt does not follow recommendations

If your llms.txt file does not follow recommendations, large language models may not be able to understand how you want your website to be crawled or used for training. The [llms.txt](#) file should be a Markdown file containing at least one H1 header.

Error

File is missing a required H1 header (e.g., "# Title").

File does not appear to contain any links.

These audits highlight best practices for improving the accessibility of the website for AI agents.
